

RENTAL MARKET REPORT

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2014

Highlights

- In the primary rental market, the apartment vacancy rate in the Edmonton CMA increased to 1.7 per cent in October 2014 from 1.4 per cent in October 2013.
- The average rent for a two-bedroom apartment in new and existing structures was \$1,227 per month in October 2014.
- In rental structures common to both the October 2013 and 2014 surveys, the year-over-year change in the average rent for a two-bedroom apartment was 6.1 per cent.

Primary Rental Market Survey

Overview: Vacancies and Rents Increased in the Edmonton CMA

According to the results of the Rental Market Survey conducted by CMHC in October 2014, the vacancy rate¹ in the primary rental market in the Edmonton Census Metropolitan Area (CMA) was 1.7 per cent, up slightly from 1.4 per cent a year prior. This is the first increase in the apartment vacancy rate since 2009. Although the vacancy rate inched up, it remained relatively low as demand for rental housing in Edmonton continued to be supported by increasing employment, rising wages, and elevated migration.

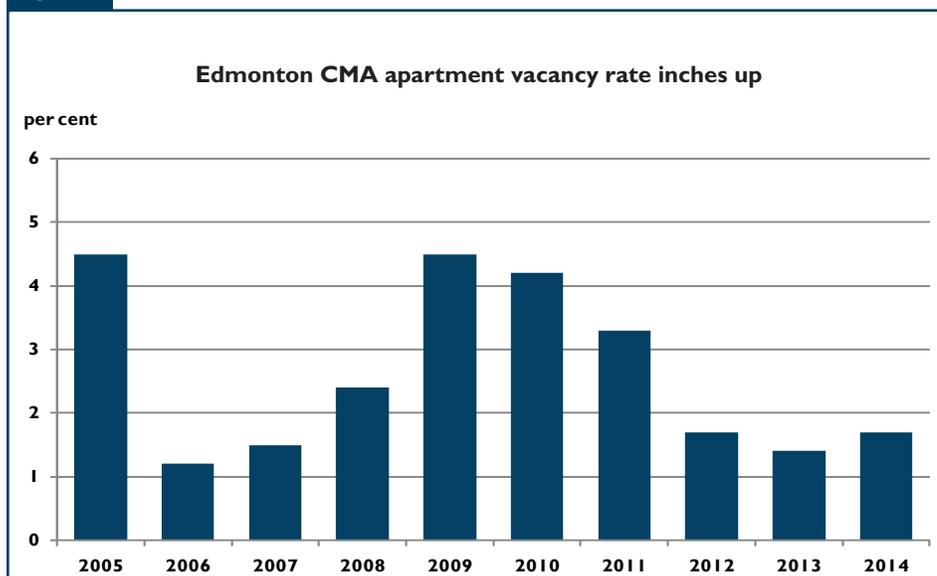

The slight uptick in the vacancy rate can be attributed to the supply of units rising faster than the demand

for units. Lower levels of migration and slower employment growth in Edmonton in 2014 have eased some of the demand-side pressures in the rental market while an increase in the number of apartments in the primary rental universe have propped up supply. Overall, just over 59,000 rental units were occupied in October 2014, up from about 57,700 units in the same month of 2013.

Although the apartment vacancy rate moved slightly higher, the rate was still relatively low and resulted in an increase in rents. Same-sample rents² for two-bedroom apartments rose 6.1 per cent year-over-year in October 2014, following a 5.6 per cent increase in 2013. This is the highest level of same-sample rent increases since 2008. Accounting for both new and existing structures, the average rent for a two-bedroom apartment³ was \$1,227 per month in October 2014.

| Apartment Vacancy Rates (%) by Major Centres | | |
|---|--------------|--------------|
| | Oct. 2013 | Oct. 2014 |

Figure 2

Source: CMHC, October Survey

¹ Based on privately initiated rental apartment structures of three or more units.

² When comparing year-over-year average rents, the age of the building needs to be taken into consideration because rents in newly-built structures tend to be higher than in existing buildings. By comparing rents for units that are common to both 2013 and 2014 October Rental Market Surveys, we can get a better indication of actual rent increases paid by most tenants.

³ Rents may not include utilities such as heating and electricity.

The overall apartment availability⁴ rate in the Edmonton CMA was 2.5 per cent in October 2014 unchanged from one year prior. The difference between the availability rate and the vacancy rate was 0.8 percentage points in October 2014, compared to 1.1 percentage points in the same month of 2013. A smaller differential between the availability rate and the vacancy rate would point to fewer units becoming vacant in the months ahead.

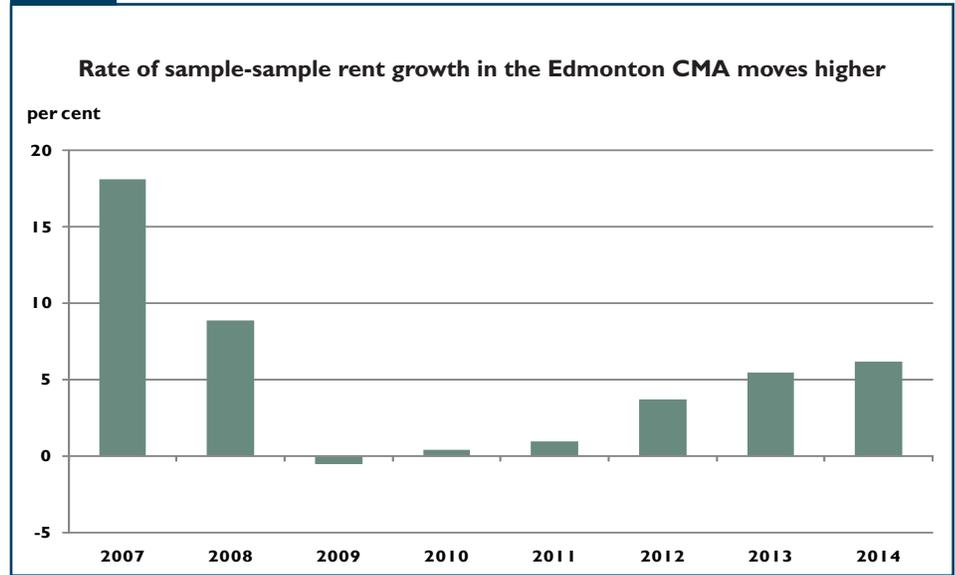

Like the vacancy rate for apartments in the primary rental market, the vacancy rate in purpose-built rental row units also increased, rising from 0.9 per cent in October 2013 to 1.7 per cent in October 2014. However, unlike the increase in the apartment vacancy rate, this increase was attributable to slightly lower demand as the number of row units in the universe remained relatively stable. Same-sample rents for all row units increased 7.6 per cent year-over-year, from 6.9 per cent a year prior. When both new and existing structures are included, rent for a two-bedroom row unit averaged \$1,266 per month in October 2014.

Submarket Results:

Vacancy rate increases in most areas

The apartment vacancy rate in the Edmonton CMA increased for the first time in five years in 2014, rising from 1.4 per cent in the fall of 2013 to 1.7 per cent in October 2014. Despite the small increase, the vacancy rate remained well-below the preceding 10-year average of three per cent and is indicative of strong demand for rental housing in the Edmonton CMA.

Figure 3

Source: CMHC, October Survey

The apartment vacancy rate showed some variation across the Edmonton CMA. It ranged from 0.6 per cent in West Jasper Place and Spruce Grove to three per cent in North Central Edmonton. The vacancy rate within city boundaries was the same as the average vacancy rate in areas outside of the city limits. However, unlike the vacancy rate in the City of Edmonton, the average vacancy rate in Edmonton's outlying areas declined from 2.1 per cent in October 2013 to 1.7 per cent in October 2014.

Most areas of the Edmonton CMA posted an increase in the apartment vacancy rate. The largest increase in the vacancy rate occurred in Strathcona County, which had posted one of the lowest rates in October 2013. Most recently, the vacancy rate in Strathcona County increased from 0.3 per cent in the fall of 2013 to 1.8 per cent in October 2014. Unlike the overall trend for the Edmonton CMA, the gain in the vacancy rate in Strathcona County was not a result of an increase in the number

of apartments, as the universe was unchanged from October 2013 to October 2014. Other areas with increases in the apartment vacancy rate included Southwest Edmonton, where the rate rose from 0.3 per cent in October 2013 to 1.4 per cent in the same month of 2014, and Northeast Edmonton, where the vacancy rate went from 1.8 per cent to 2.9 per cent over the same comparison. Both of these areas saw the number of apartments in their universe increase.

While the average apartment vacancy rate increased for the Edmonton CMA, there were some zones that bucked this trend. Within city limits, West Jasper Place was the only area to post a decline in the vacancy rate, where it declined from 1.1 per cent in October 2013 to 0.6 per cent in the same month of 2014. Outside of city limits, both Leduc and Fort Saskatchewan saw their vacancy rate move lower, to 1.4 per cent and 2.5 per cent, respectively.

⁴ A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant.

Figure 4

Source: CMHC, October Survey

The vacancy rate showed little variation across bedroom sizes, ranging from 1.4 per cent for apartments with three or more bedrooms to 1.9 per cent for bachelor units. The increase in the vacancy rate for two-bedroom units, from 1.3 per cent to 1.7 per cent, coincided with the largest increase in the rental universe. There were 25,812 two-bedroom apartments in the primary rental market in October 2014, a 4.7 per cent increase from the same period of 2013. The vacancy rate for one-bedroom apartments was 1.8 per cent in October 2014, compared to 1.6 per cent 12 months earlier.

The relatively low vacancy rate across the Edmonton CMA led to continued growth in rents. Same-sample rents for all apartment units rose 6.2 per cent year-over-year in October 2014, up from a 5.5 per cent gain in October 2013. All zones in the Edmonton CMA where data was available posted an increase in same-sample rents, ranging from 4.3 per cent in Fort Saskatchewan to 9.2 per cent in Castledowns. This coincides with the Fort Saskatchewan vacancy

rate being above the average for the CMA, while the rate in Castledowns was below the CMA average.

Accounting for both new and existing structures, the average rent for a two-bedroom apartment in the Edmonton CMA was \$1,227 in October 2014. However, average rents varied across zones in Edmonton. North Central Edmonton posted the lowest average rent for a two-bedroom apartment, at \$1,003 per month. This relatively lower rent coincides with a vacancy rate among the highest across zones. In contrast, two-bedroom rents in St. Albert and Downtown were among the highest in the CMA, averaging \$1,355 and \$1,330 monthly, respectively.

Supply and Demand:

Rental apartment universe expands

Demand for rental housing in Edmonton remained strong, supported by rising employment and elevated migration. However, the pace of employment growth in the Edmonton

CMA, particularly in full-time positions has slowed in recent months, easing some of the demand pressures for rental housing. After rising over 4.5 per cent year-over-year in the first and second quarters of 2014, employment growth moved down to two per cent year-over-year in the third quarter. Job creation was concentrated in part-time employment, which accounted for 11,900 new positions. In contrast, the number of full-time positions increased by 2,900. Although the pace of expansion is slowing, overall employment is still above 2013 levels and these gains are supporting demand for rental housing in Edmonton.

Elevated migration is an additional factor that continues to support rental demand. Net migration is forecast at 31,000 for the Edmonton CMA in 2014. Although this is down from the record 38,511 in 2013, it is still well-above the preceding ten-year average. Evidence of this decline can be seen in the overall trends for Alberta. Net migration to the province totalled 45,083 in the first six months of 2014, down from 50,810 in the same period of 2013. The reduction was attributable to a significant decline in the number of non-permanent residents. Many of these migrants choose the rental market for their housing needs, thus the decline slowed the overall rate of growth of rental demand in the Edmonton CMA.

For the second consecutive year, the number of apartments in the Edmonton CMA rental market universe increased. There were 60,032 apartments in the rental universe in October 2014, three per cent higher than the 58,503 units reported in 2013. Rental construction, which had been relatively low from 2006 to 2010, has picked up in Edmonton in the past three years as the relatively

low vacancy rate has enticed builders to add new rental supply. This was particularly apparent in St. Albert, which posted one of the highest rents for a two-bedroom apartment. In this area, the number of apartments in the rental universe increased 33 per cent from 767 in October 2013 to 1,019 in October 2014, due entirely to the addition of newly constructed units.

Rental apartment starts have moved lower in 2014. In the first nine months, 974 rental apartments were started in the Edmonton CMA, down 24 per cent from the 1,287 started in the same period of 2013. Rental apartment starts have been held back in 2014 by the relatively high number of units under construction. As of September 2014, there were 2,773 rental apartments under construction, the highest number in over 30 years.

Condominium conversions in Edmonton continue to be low in 2014. Rents in Edmonton have been increasing at a faster pace than resale condominium prices in recent years, thus reducing the incentive to convert rental apartments to condominiums. Heightened competition from the resale and new condominium markets also contributed to the reduction in conversions. From October 2013 to October 2014, 190 rental apartments were converted to condominiums, a decline from 214 in the previous year and significantly lower than the preceding five year average of 470.

Secondary Rental Market Survey⁵:

Vacancy rate at 2.3 per cent for rental condominium apartments

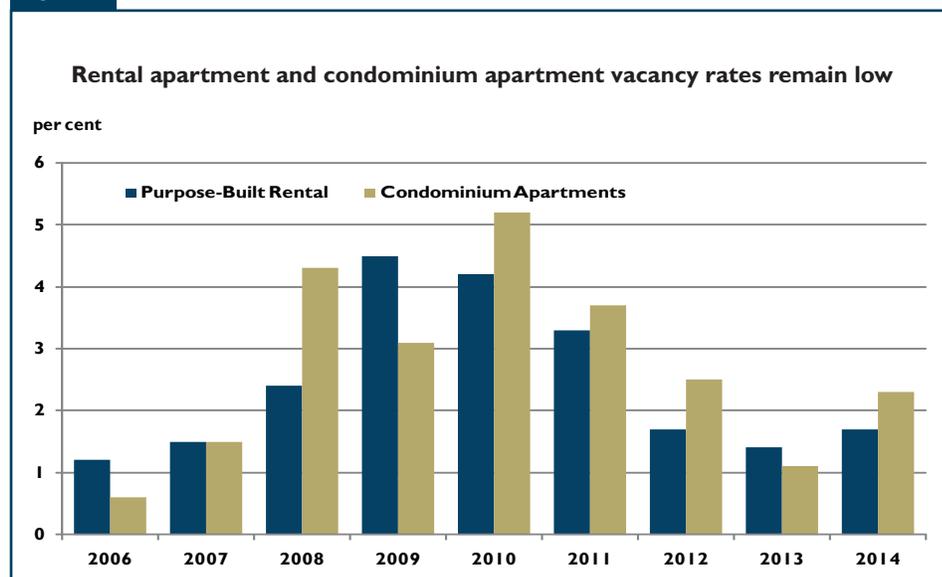

CMHC's Secondary Rental Market Survey collects information on rented condominium apartments, single-detached houses, double (semi-detached) houses, freehold row/town houses, duplex apartments, accessory apartments, and apartments which are part of a commercial or other type of structure containing one or two dwelling units.

The vacancy rate for rental condominium apartments was 2.3 per cent in October 2014 compared to 1.1 per cent in the same period of 2013. Despite the change, demand for rental condominium apartments

remains strong and is being supported by elevated migration, employment growth, and the relatively low vacancy rate in the primary rental market. The vacancy rate for rental condominiums ranged from 1.3 per cent in Edmonton's Other Metro zone to 2.6 per cent in Suburban areas. The vacancy rate in Central Edmonton was 2.3 per cent.

The average rent for a two-bedroom condominium apartment was \$1,179 in the fall of 2014 compared to \$1,292 monthly one year prior. Like the traditional rental market, overall changes in rent can be influenced not only by market pressures, but also by the changing composition of the market as units enter and exit the market each year. In Central Edmonton, a two-bedroom condominium apartment rented for an average of \$1,159 per month, while in Suburban areas, the rate was \$1,220.

Figure 5

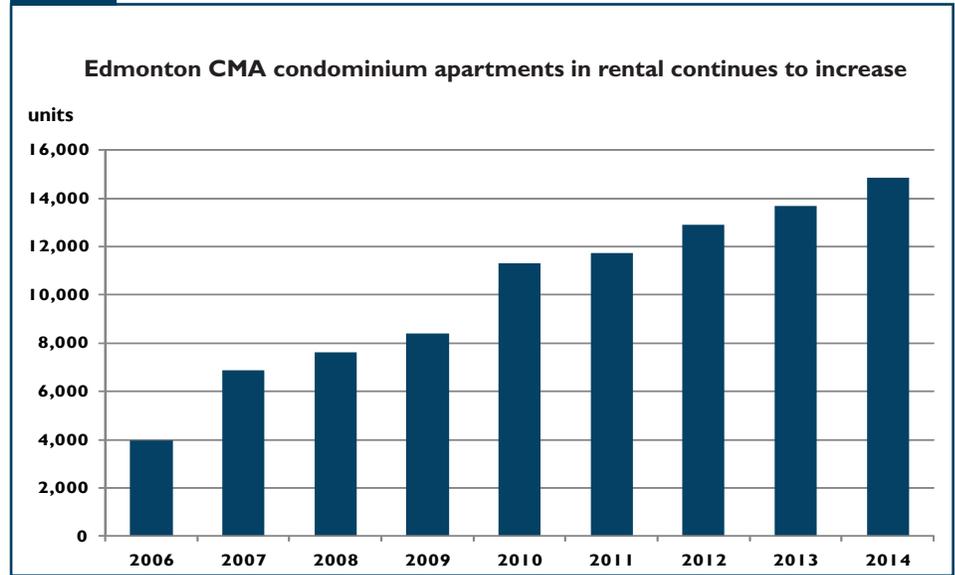

Source: CMHC, October Survey

⁵ The secondary rental market represents self-contained units such as condominiums and other rental homes not surveyed in CMHC's Rental Market Survey. There are two types of Secondary Rental Market Surveys: of rented condominiums and of rent structures with less than three self contained units. The secondary surveys are conducted jointly or individually for selected centres across Canada. Readers are reminded to use caution when comparing data year-over-year in the Secondary Rental Market Survey since the type of dwellings surveyed and their characteristics vary from one year to the next. Owners of these types of dwellings can, for example, shift them in and out of the rental market. Unlike structures in the RMS, which are purpose built for rental tenure, structures in the secondary rental market can be a rental structure one year and an owner-occupied structure the next.

There were 44,352 condominium apartments in the Edmonton CMA in October 2014. Of these, 14,874 units were identified as being in the rental market. This translates into 33.5 per cent of all condominium apartments, compared to 32.2 per cent in the same month of 2013. At 38.3 per cent, Central Edmonton had the highest proportion of condominium apartments in the rental universe and by extension, accounted for the largest number of condominium apartments by sub area in the rental market. With rents rising at a faster pace than resale condominium prices in the Edmonton market over the past couple of years, many owners of condominium apartments are choosing to rent out their apartment, rather than list it for sale. This has led to an uptick in the proportion of condominium apartments in the secondary rental market in Edmonton.

CMHC's Secondary Rental Market Survey also collects information on households living in single-detached houses, semi-detached houses, row/town home, duplex apartments, and accessory apartments, which include apartments in a residential dwelling, and those in a commercial or other

Figure 6

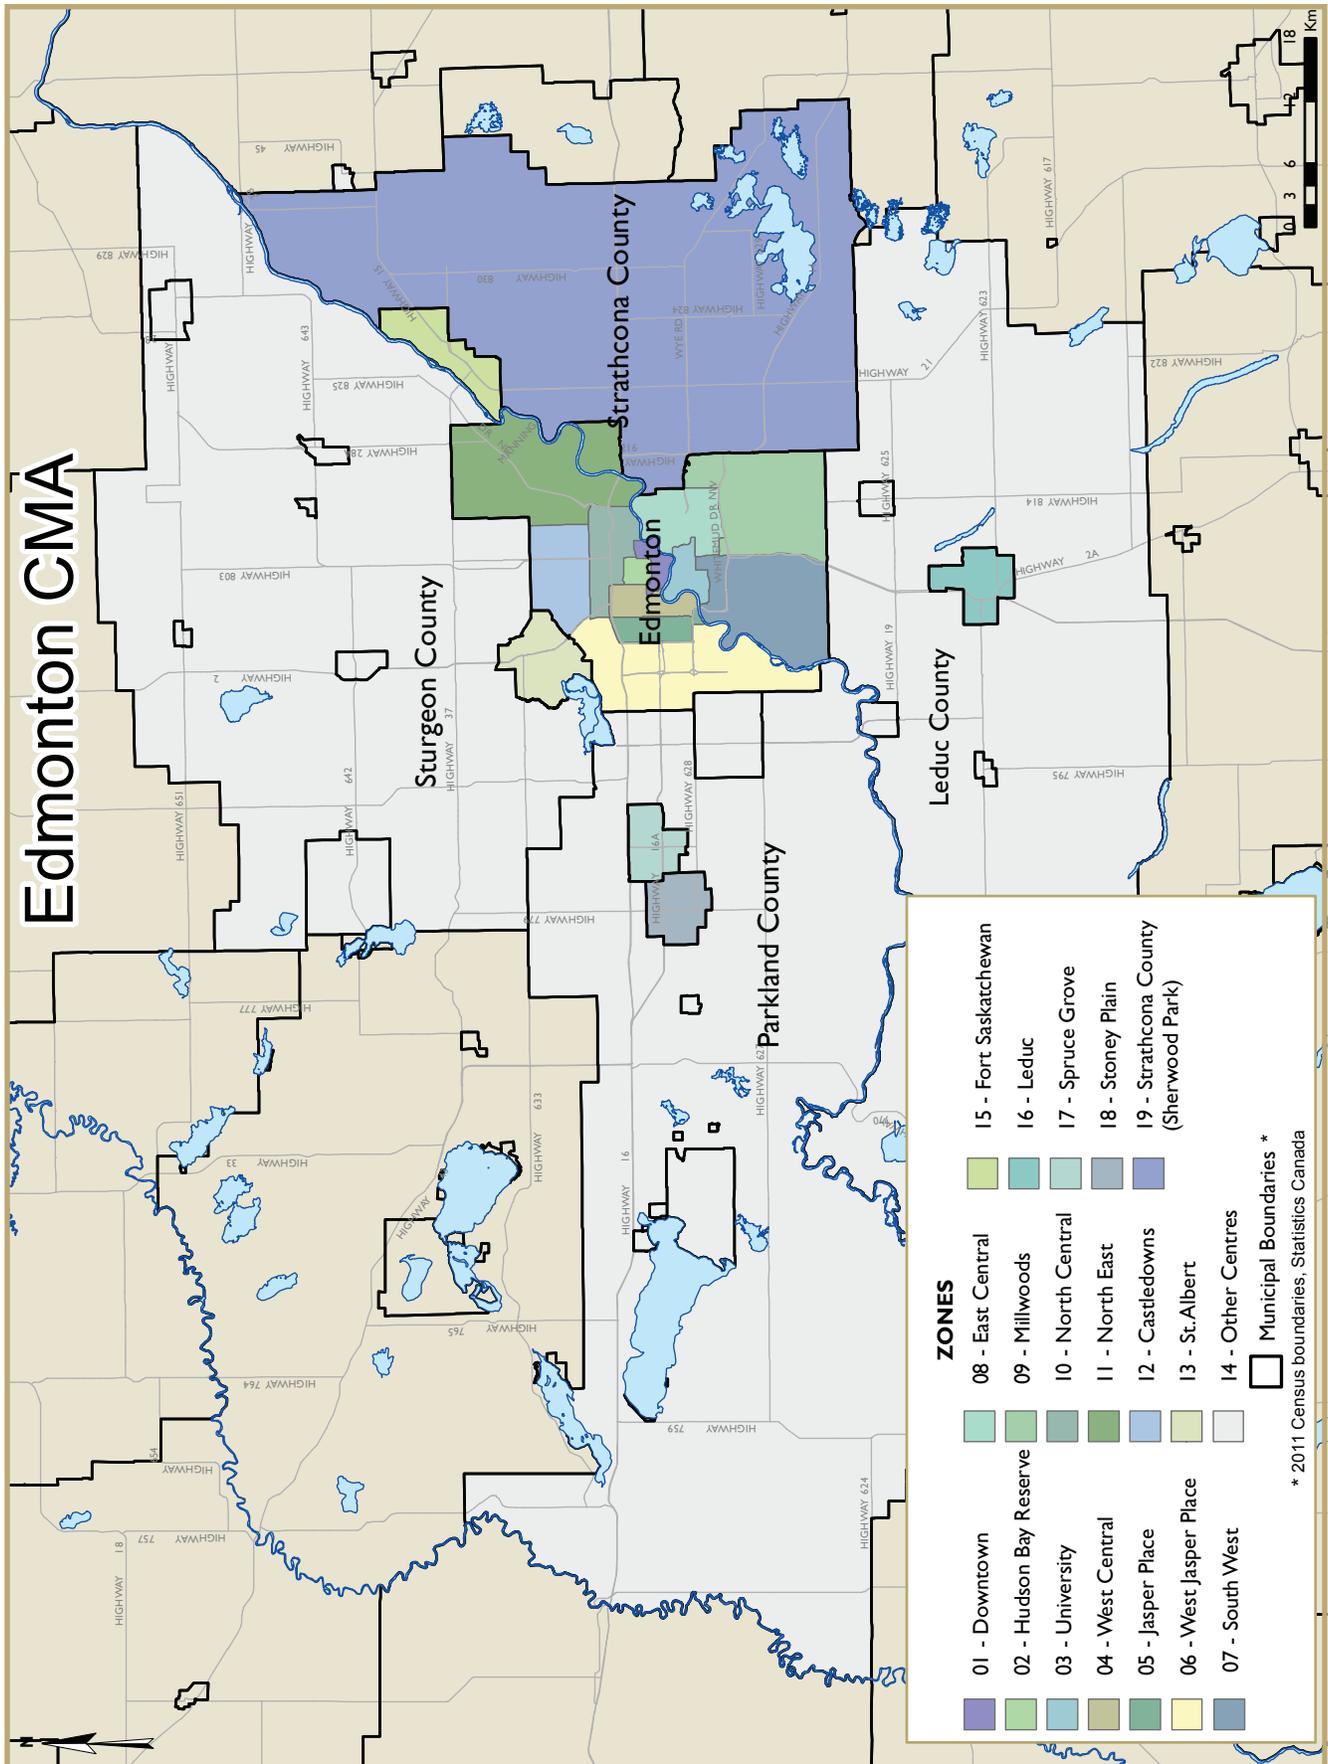

Source: CMHC, October Survey

structure, where there are only one or two dwelling units.

Based on CMHC's survey, the number of renter households living in this segment of the secondary rental market was an estimated 58,015 in the fall of 2014, compared to 55,887 in the same period of 2013. Almost half of these households were renting single-detached homes, while about 40 per cent were renting a semi-detached, row, or duplex unit.

The average rent for a single-detached home was \$1,397 per month in the fall of 2014, compared to \$1,300 in the same period of 2013. Semi-detached, row, and duplex units rented at an average of \$1,306 per month while other units, including accessory suites, reported an average rent of \$1,169 monthly in the fall of 2014.

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

- No units exist in the universe for this category n/a: Not applicable

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

- No units exist in the universe for this category n/a: Not applicable

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

↑ indicates the year-over-year change is a statistically significant increase

↓ indicates the change is a statistically significant decrease

- indicates that the change is not statistically significant

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey** (RMS) every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

Use caution when comparing changes in statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. These tables include indicators to help interpret changes. ↑ indicates the year-over-year change is a statistically significant increase, ↓ indicates the year-over-year change is a statistically significant decrease, while – indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market** (SRMS) in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS – rented single-detached homes, semi-detached (double) homes, rented freehold row/townhomes, rented duplex apartments (i.e., one-above-other), rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type), rented condominiums (can be any dwelling type but are primarily apartments), and one or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: Condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca or follow us on [Twitter](#), [YouTube](#) and [Flickr](#).

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.

Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is available for free on CMHC's website. You can view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient! Go to www.cmhc.ca/housingmarketinformation

For more information on MAC and the wealth of housing market information available to you, visit us today at www.cmhc.ca/housingmarketinformation

To subscribe to priced, printed editions of MAC publications, call 1-800-668-2642.
